Introduction

“The Water Company” is the premiere destination for water treatment solutions and Water Shop Business.

Its reputation in providing ground-breaking operations within genres such as Domestic, Commercial and Community Based RO plant landmarked it as the go-to organization in the region.

With a seasoned background in sourcing and developing innovative water technology that not only answers the call to, but also foresees gaps in the market, “The Water Company” has cemented its position as a leading consultant, facilitator and problem solver in this specialized industry.

Our vision is to preserve an ethos of professional, methodological and innovative services that showcase our commitment to excellence in the field of advanced water technological integrations and solutions to our commercial and corporate customers.

As well as every underprivileged citizen has access to safe and clean drinking water through our unique and innovative water Business Model. We want to become the most respected and progressive social business enterprise in the country and serve as a paradigm of social impact.

The aim is to maintain and improve an infrastructure of a highly qualified team of people such as engineers, technicians, Marketing experts to name but a few, in order to showcase our commitment to our client’s requests; no matter how ambitious in its scope.

“The Water Company” offers end-to-end technical expertise, equipment and experience to provide the most successful results for their clientele.

At “The Water Company”, our goal is not to just sell; also it is to see the correct implementation and successful execution of that product by the customer at a price that fits their budgetary parameters. The rate of excellence in our customer care service lies in our 3-step approach to product development, distribution and follow-up.

From Design, Installation, System Testing, Training, Project completion to post project support, “The Water Company” is there every step of the way.

Corporate Summary

Company Name: The Water Company (Pvt) Ltd[®]

Year Registered: 2015

Registered with:

- Securities and Exchange Commission of Pakistan
- Punjab Food Authority
- Sindh Food Authority
- Intellectual Property of Pakistan (Trade Mark & Copyright)
- FBR- Federal Board of Revenue

Website: www.thewatercompany.pk

Email: sales@thewatercompany.pk

Telephone: 03-111-000-242

Extent of Capabilities

General

"The Water Company" Commercial and Industrial Water treatment Systems designs and installs various water treatment facilities for Commercial and industrial applications. We are also capable of providing professional engineering and environmental services in a wide range of areas.

A list of these capabilities follows:

- Feasibility Studies, including Environmental Impact Statements
- Project Management - from simple to complex projects including performance based Design Build-Operate Contract Management.
- Research and Development of Emerging Technologies
- Process, Civil, Electrical, Mechanical and Infrastructure Design
- Specification Preparation and Tender Assessment
- Operation and Maintenance Assessment and optimization
- Legislative Compliance Interpretation and negotiations with regulators
- Preparation of Regulatory Applications
- Wastewater Strategic Planning

Water Treatment

“The Water Company” can design and supply a range of water treatment equipment from pressure filters to ozone.

Disinfection equipment to reverse osmosis and ultrafiltration,

“The Water Company” also designs facilities for the treatment of bore water or water from rivers and streams which require colloidal particle removal and disinfection.

If purified water to a high standard is required then “The Water Company” can supply either a Nano-filtration or reverse osmosis filtration systems to ensure the cleanest water is available for any industrial or municipal application.

“The Water Company” will design and engineer a water treatment system for your application which will be cost effective and efficient.

Operation and Maintenance Assessments

“The Water Company” provides an operation and maintenance optimization service to industry through the experience of its engineers and technical officers who have commissioned, operated and maintained water and wastewater treatment plants.

We can assess the design capability of a plant and check this against a performance assessment by visual and instrument checks, as well as monitoring and collating available data.

The results of our assessments are included in comprehensive reports, describing the plants capability, performance and the necessary steps to either tune the plant or modify it to produce effluent to meet the statutory standards or provide cost saving in disposal charges.

Operational process optimization through reference to biochemical process kinetics can often yield capacity and performance improvements which minimize or even negate the need for further infrastructure investment.

“The Water Company” can also carry out the operation and maintenance of your water or wastewater treatment plant.

“The Water Company” has the capacity to operate all water treatment facilities and have considerable experience in the maintenance of such facilities.

Training

With the need to make the most of scarce capital resources it has become necessary to place increased stress on facility operation, requiring a higher degree of operator knowledge and skills.

“The Water Company” has found that the provision of both initial and ongoing training for operators and staff of its clients has become an essential service and a viable alternative to infrastructure investment.

The preparation of Standard Operating Procedures (SOP's) has also become a more common requirement of informed clients; a requirement which “The Water Company” is familiar with satisfying.

Project Management

Engineering complex projects with sensitivity and economy describes our approach to project management.

Our project managers appreciate the need for compromise in the project development process by a multi-disciplined team and are capable of driving the project on a correct course having defined the constraints.

Our project managers are familiar with Microsoft Project 98, project management software and supply reports to the client on a fortnightly basis to ensure the client has an understanding of current tasks underway.

The industry shift towards 'Turnkey' project management has been recognized by “The Water Company” as an important factor in cost and risk minimization.

“The Water Company” is familiar with the many different 'Turnkey' contract approaches including Design-Build-Operate (DBO), Build-Own-Operate-Transfer (BOOT) and Operate-Build-Operate-Transfer (OBOT).
